Class Test

F.M. = 10

1. Write a program in support of a Dessert Shoppe which sells candy by
   the pound, cookies by the dozen, ice cream, and sundaes (ice cream
   with a topping) by pound. Your program will be used for the
   checkout system.
   To do this, you will implement an inheritance hierarchy of classes
   derived from a DessertItem abstract superclass.
   The Candy, Cookie, and IceCream classes will be derived from the
   DessertItem class. The Sundae class will be derived from the
   IceCream class.
   You will also write a Checkout class which maintains a list (Vector)
   of DessertItem's and their quantities.
